

Graph-Based Neural Networks for Modeling Long-Range Epigenetic Regulation

Xavi Loinaz (advised by Prof. Ritambhara Singh)

Agenda

1 - Problem Motivation

2 - Method: GC-MERGE

3 - Method: XL-MERGE

4 - Discussion

Problem Motivation

Histone Marks

Problem Motivation

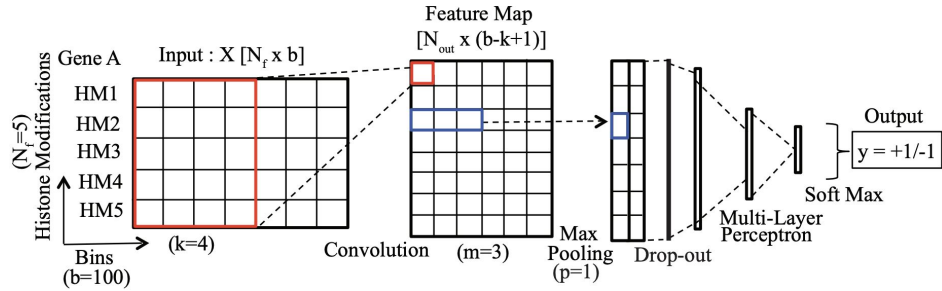

Method: GC-MERGE

Method: XL-MERGE

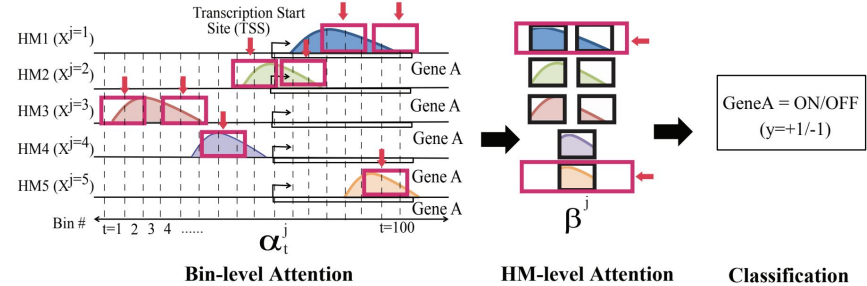

Discussion

Prior Methods in Deep Learning

Histone marks → Gene expression prediction

DeepChrome (Singh et al.)

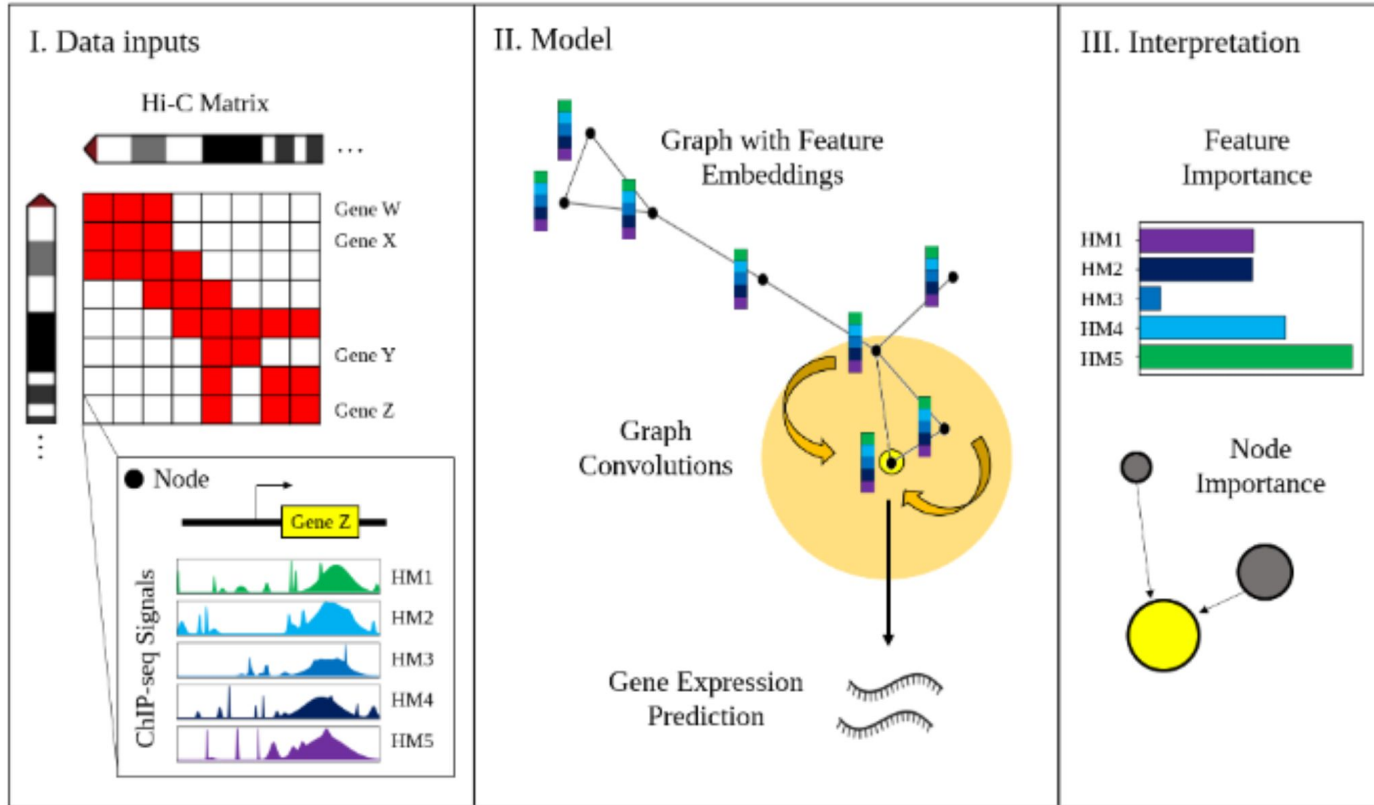

AttentiveChrome (Singh et al.)

But what about long-range regulation effects?

Method: GC-MERGE

Graph Convolutional Model of Epigenetic Regulation of Gene Expression (GC-MERGE)

Overview

Results and Limitations

3 Results, 3 Limitations

- Binary prediction: AUROC from 0.88 to 0.91
 - Still outperformed by best models
- Some evidence that long-range interactions help predictions
 - Shuffling long-range neighbors intrachromosomally does not worsen performance
- Some proof-of-concept evidence to validate known long-range regulations
 - Interpretation results have high variance

Method: XL-MERGE

Xavier Loinaz's **Model of Epigenetic Regulation of Gene Expression (XL-MERGE)**

Architecture

Pre-embedding Formulation in XL-MERGE

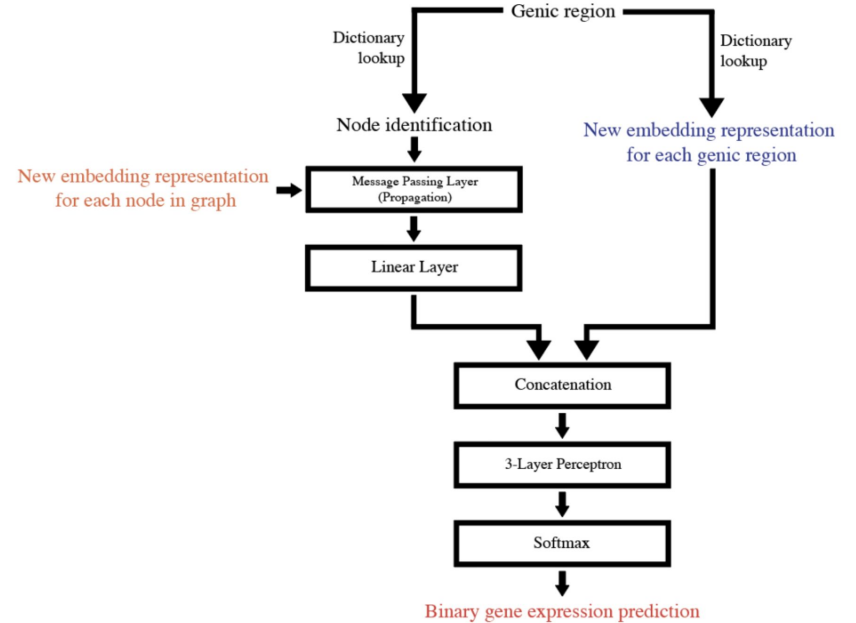

GC-MERGE 10-kb region for each node in graph

10kb TSS-centered data for each genic region

Gene Expression Prediction Formulation in XL-MERGE

Results and Improvements

3 Results, 3 Improvements

- Binary prediction: AUROC from 0.91 to 0.932
 - Ties or outperforms best models
- Stronger evidence that long-range interactions contribute to predictions
 - Ablation analysis for shuffled neighbors shows great difference in prediction power
- No interpretation results yet
 - Model gives simpler, more realistic possibilities for interpretation

Discussion

Conclusions/Further Directions

Conclusions

- Evidence for effectively capturing long-range interactions in model
- Potential for simpler tractable interpretation to be performed on model

Further Directions

- Figure out interpretation angle
- Test more mechanisms of extracting long-range regulation information
- Train different weights of model at different rates
